

NEWS FOR FARRIERS

New! Kerckhaert Dura Max

The Kerckhaert Dura Max will replace the Kerckhaert Dura Plain and Kerckhaert Standard Max series by combining features of both shoe styles into one.

The Dura Max features a full, thick toe and a hybrid width of stock between the original stock sizes of the Dura Plain and Standard Max. Dura Max shoes have increased width and thickness from the Dura Plain and Standard Max. The 3/8" thickness provides wear and strength. The width of stock, deep V-crease, and clean punching makes this an excellent shoe for modifications and extra wear. The Dura Max in sizes 00, 0 and 1 are now being shipped to dealers as the replacement for Dura Plain 00, 0 and Standard Max 0, 1 and 2. Size 2 will be available later this Summer. Scan the QR code with your phone camera to learn more. Ask an FPD dealer near you about this new shoe!

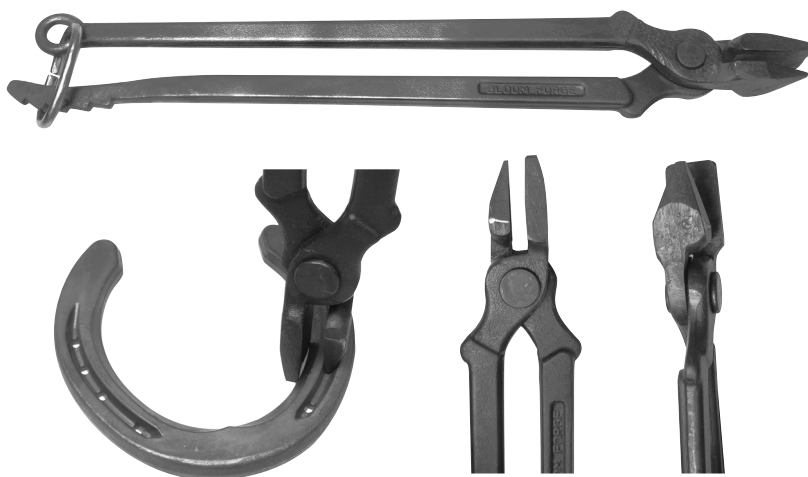

Kerckhaert Race Plates Dominate

Kerckhaert Race Plates continue to be the most widely used in the racing market. The quality, design and shape options are key reasons for their popularity. However, as many of you have seen, the consistent availability of the shoes and the rapid work to have all the HISA approved styles (especially the low toe hind) has contributed to the success, as well. If you haven't heard – the first-place winners and second place finishers of all three Triple Crown races were wearing Kerckhaert race plates! View the full line of HISA Compliant shoes at www.farrierproducts.com/hisa.

New! Bloom Hot Fit Lock Tong

Bloom Forge is now producing another Hot Fit Tong style. This new style features a "lock ring" on the end of the reins to secure the tong to the shoe. The tong price is the same as the original Hot Fit Tong that will continue to be available. Ask an FPD dealer near you about this new tool.

FOOTPRO DOUBLE SIDED BENCH GRINDER DISC

AS SEEN
ON FPD'S
BLOG

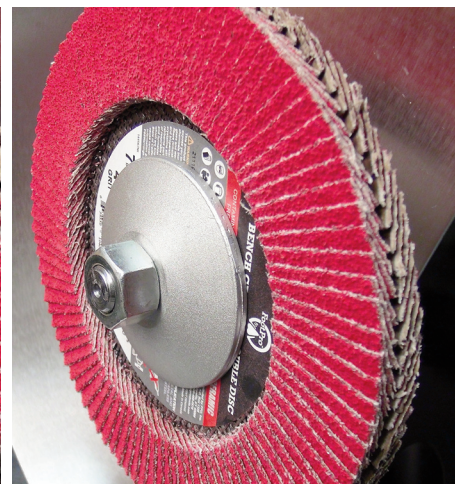

If you do a lot of heel check grinds this is the attachment for you. It is also useful for notching pads for clips, beveling the inside web of shoes and touch up of clips. It has a 40-grit Ceramic abrasive that does an excellent and efficient job and is long lasting. A couple quick notes important to mounting the disc properly. It has a 5/8" arbor so it fits perfectly on grinder shafts of 5/8". However, you need a spacer to keep it far enough from the housing to be able to tighten. That spacer will be 3/4-1" long for most grinders. Most importantly, it is directional, meaning you can only mount it properly going in one direction. There is an arrow on the label indicating the direction and it should match the direction your grinder shaft is turning. Be sure you check this before using it. If it is mounted in the wrong direction the disc will not work and will be damaged very quickly.

3/4"x1" spacer needed.

Mount in right direction.

Ready to work.
